SPN
INGENIERÍA Y PROYECTOS SL

HEALTH AND SAFETY

At SPN, we provide technical assistance in health and safety, tailoring our services to the characteristics of each project, the contracted scope and the responsibilities established by applicable regulations.

Scope of Our Services

Health and safety studies
Preparation or technical support for Safety and Health Studies and Basic Studies, based on the project and contracted scope.

Health and safety plans
Preparation, review or technical support for health and safety documentation, according to the assigned functions and applicable regulations.

Hazard identification and risk assessment
Analysis of risks associated with the planned works and conditions, within the contracted technical scope.

Specifications and prevention documentation
Preparation or review of conditions, criteria and technical documentation relating to health and safety.

Preventive measures and protection
Definition and proposal of technical and organisational measures, collective protection and signage.

Assessment of safety measures
Measurement and cost assessment of preventive items and resources when included in the contracted scope.

Personal and collective protective equipment
Identification of PPE needs and collective protective measures based on the risks assessed.

Coordination and technical assistance
Support, monitoring or coordination on health and safety matters when SPN has been formally assigned that function.

Our Approach

Prevention

Compliance

Protection

How We Deliver the Project

1. Initial review
2. Risk identification
3. Preventive measures
4. Prevention documentation
5. Review and monitoring
6. Technical coordination
7. Report and close-out

Health and safety with technical rigour and responsibility.
