SITE SUPERVISION

We supervise and coordinate construction works to ensure compliance with the project, regulations and contractual requirements, monitoring quality, issues, interim payment certificates and documentation through to final acceptance.

Scope of our services

Project review

Technical assessment of drawings, details and site conditions to ensure their correct interpretation and constructability.

Execution supervision

On-site monitoring of works, materials, quantities and proper execution in accordance with the project.

Quality and regulatory control

On-site monitoring of works, materials, quantities and proper execution in accordance with the project.

Stakeholder coordination

Coordination among the developer, design and supervision team, contractors, subcontractors and suppliers.

Certifications and measurements

Review of executed work, measurements, interim payment certificates and associated technical and financial documentation.

Issue management

Recording, analysis and resolution of issues, non-conformities and adjustments during execution.

Construction documentation

Management of minutes, reports, site records, as-built drawings and final documentation.

Handover and close-out

Support with testing, finishing works, handover and delivery of documentation to the client.

Our approach

Technical control

Coordination

Compliance

How we deliver the project

1. Requirements review
2. Supervision and coordination
3. Control and certification
4. Issue management
5. Handover and delivery

Site supervision with coordination and compliance
